

Vijay Sachdeva

vijaysachdeva@gmail.com • SF Bay Area, CA • [linkedin.com/in/vijay-sachdeva/](https://www.linkedin.com/in/vijay-sachdeva/) • [GitHub \(US AI Infra Monitor\)](#)

Professional Summary

Infrastructure strategy and analytics leader with 19 years of experience operating at the intersection of data, AI, capital efficiency, and physical network infrastructure. Proven track record at Meta specializing in scaling capacity, optimizing multi-million-dollar footprints, and driving automation for global fiber networks. Expert in translating complex and fragmented data into high-stakes strategic insights for VP-level stakeholders, and building custom autonomous pipelines that accelerate time-to-capacity.

Skills

- **Infrastructure Strategy:** Capacity Planning, CapEx/OpEx Optimization, Routing & Telemetry
- **AI & Data Engineering:** Agentic Workflows (Claude Code, Codex), AI Evals, Automated Pipelines, ETL

Professional Experience

META | Data & Analytics Manager / Strategy Manager @ Network Infra | 2018–2026

- **Strategic Vendor Operations:** Accelerated Meta's largest US backbone partnership to 105% of delivery targets within 6 months by building an end-to-end data automation platform from scratch — synchronizing real-time vendor updates with internal inventory tracking and proactive anomaly alerts, resolving a 70% capacity delivery bottleneck that had no existing tooling.
- **Infrastructure Asset Recovery:** Eliminated \$43M in annualized overhead by writing custom auditing code to surface unindexed physical infrastructure across Meta's global data center network — uncovering 900 mislabeled ILA sites (33% of total backbone inventory) invisible to standard systems and recovering capacity that bypassed 12+ months of procurement lead time critical to AI buildout.
- **AI Data Governance & Evals:** Scaled AI query accuracy from 30% to 85% across Meta's internal assistants (MetaMate) and external coding engines (Claude Code) by re-architecting data tables with semantic metadata and engineering automated, continuous evaluation frameworks (evals) — now Net Infra's reference model for validating AI pilots before rollout.
- **Global Subsea Strategy:** Unlocked 4G access for 200M people across Africa by engineering a value-exchange consortium model for the \$1B 2Africa subsea cable — structuring co-investment deals with Airtel, Vodacom, and MTN that traded lower subsea unit costs for terrestrial infrastructure expansion, preventing a regional capacity crunch before it materialized.

inCODE CONSULTING (ERICSSON) | Consulting Manager / Sr. Consultant | 2013–2018

- **Telecom Spectrum Valuation:** Equipped Reliance with the pricing intelligence to bid competitively in India's 2015 4G spectrum auction by building market-demand and valuation models that benchmarked spectrum value across diverse regional markets.
- **Infrastructure Modernization:** Freed premium 2.5GHz spectrum for high-capacity 4G/5G rollout by leading Northeast US PMO engineering operations to decommission 27,000 legacy Sprint iDEN cell sites.

MERITECH | Software Engineer | 2005–2011

- **Network Diagnostics Engineering:** Enabled one of the world's first commercial 4G launches by leading development of the Sigma product portfolio — the trusted network-validation tooling that NTT Docomo's nationwide deployment had previously lacked.

Education

- **MBA, Strategy & Operations,** Purdue University | **B.Tech, IT,** Kurukshetra University
